

## ***Vulcan Recommendation Letter***

**RADET Constanța has installed 12 units of Vulcan S25 in Constanța District Heating Stations.**

We took this decision so we could decrease the maintenance costs for plate heat exchangers; the water hardness level in Constanța is very high so we have to disassembly very often the plate heat exchangers and clean them with a special solution; after several disassembly rounds the gaskets are damaged and we have to replace them.

After installing the units, we realized that the deposits are significantly reduced.

As a conclusion we recommend Vulcan units as an effective solution against problems caused by water quality.
