

RECOMMENDATION LETTER

Considering the high level of water hardness in Iasi city in Romania and the fact that there is a large ongoing rehabilitation process, our company installed Vulcan electronic anti-scale devices on the cold water pipes.

After approximate 3 months when we disassembled the plate heat exchangers, we discovered that there were no scale deposits. We have to mention that we usually had to clean the heat exchangers at least once per month.

Considering the above mentioned facts we recommend Vulcan equipment manufactured by CWT Germany as a good solution against calcium carbonate deposits with visible effects in protection the equipment and pipes and for having less maintenance for tap water and heat exchangers.

Technical Manager of CET Iasi
Ing. Costica Neculai

- Main services from CET:
- Power production and delivery
 - Heat production and delivery – process steam for industry
 - Heat distributor – hot water for the city of Iasi
