

### Installation details

- Model: Vulcan S25  
Location: THK Precision Industry  
Installation area: The main water pipe of cooling tower  
Installed by: Dalian Jiayifang

We used chemicals to remove the scale of cooling tower before. After Vulcan was installed, we stopped the dosing process, and all equipment is still running well. Vulcan completely replaced the chemicals and saves cost for the company.

In winter, the cooling tower runs with less water and full of ice, we observe every week and find that the scale is gradually reduced. After 4 months running with Vulcan, the scale in the water tank and cooling tower has been significantly reduced.

THK's Linear Motion (LM) Guide devices are an indispensable component of mechanical and electronic systems in a wide variety of industries, which are manufactured by THK for supply to customers worldwide.

Vulcan S25 installed on the main water pipe of the cooling tower.
