

We moved to a new home in Gilroy Ca that is supplied only by well water. Upon arrival, we found we had very low to no water pressure in the showers, faucets and washing machine. Upon further inspection we found all of the filters plugged with corrosion from the hard water. We cleaned all the filters and installed a water filter at the well. For a while, that seemed to help but slowly but surely things began to plug and our water pressure dropped into the house again. We were then introduced to the Vulcan. James came out and installed it for us. Since then we have had no issues with our water going into the house. We have removed the water filter at the well due to it not being necessary. I would highly recommend this product to anyone with similar issues to what we had.

Thank you for your business.
