

Tianyi Plastic Products

To:

Jiangsu Chuangjing Hemei Energy Saving and Environmental Protection Technology Co., Ltd.

Our company Tianyi Plastic Products Co., Ltd. is equipped with 3 inspection device for the central laboratory, 18 injection molding machines and 5 pipe production machines, with an annual production capacity of about 200 million RMB. However, the production line was scaled badly. We needed 1-2 times weekly manual cleaning, and each time took about 4-6 hours, which seriously affected the daily production efficiency.

When we knew about your Vulcan products, we really doubted: "can such a simple product solve the scaling problems?" We decided to give it a try.

After about 3 months trial of Vulcan S50, the scale on the equipment has been significantly reduced, which not only saves a lot of water treatment costs, but also greatly improves the efficiency of the equipment, and the cleaning interval is prolonged.

Through this test period, we do not doubt anymore. We are very satisfied with the Vulcan performance, so that we will purchase 2 more Vulcan S50!

Yours Sincerely,

The picture above is the mold of the septic tank without Vulcan treatment. After running for 1 month, it had been scaled badly, and even the small water holes were blocked. Because it was very difficult to clean, it needed to be returned to the original manufacturer for clean up, it greatly affected the production capacity.

After installing Vulcan S50 for 1 month to treat the mold of septic tank, the scale has already been significantly reduced.
