

Installation Details

Location: Suzhou Weixin Electronics
www.mflex.com

Model/Area: **Vulcan** S10 for the cooling water pipe No.1 of the air compressor

Vulcan S25 for the cooling water pipe No.2 of the air compressor

- Problems:
1. High temperature gas could not be discharged quickly from the air compressor, causing the temperature too high and had to be shut down.
 2. The air compressor cooling system was blocked by corrosion and had to shut down for maintenance, which affected the production efficiency.
 3. Without dealing with scale for a long time, it might cause equipment damage and corrosion leakage.

Installed by: Xinriyuan Company

Founded in 1984 in California, USA, MFLEX has become one of the largest flexible printed circuit manufacturers, assemblers and suppliers across the globe.

Suzhou Weixin Electronics is a wholly-owned enterprise invested by MFLEX. The company is professional to design, manufacture and assemble flexible circuit boards. Current applications for the products include consumer electronic devices, medical, automotive, aerospace and military industries.

Vulcan Effect

The customer reported that the effect was very good after installation: no need to add chemicals, no scale clogging problems nor high temperature alarm rang.
